

**National Interagency Coordination Center
Incident Management Situation Report
Sunday, August 20, 2017 – 0530 MT
National Preparedness Level 5**

National Fire Activity

Initial attack activity:	Light (77) new fires
New large incidents:	1
Large fires contained:	2
Uncontained large fires:**	25
Area Command Teams Committed:	1
NIMOs committed:	2
Type 1 IMTs committed:	7
Type 2 IMTs committed:	21

**Uncontained large fires include only fires being managed under a full suppression strategy.
[Link](#) to Geographic Area daily reports.

One MAFFS C-130 airtanker and support personnel each from the 152nd Airlift Wing, (Nevada Air National Guard), 153rd Airlift Wing, (Wyoming Air National Guard) and the 302nd Airlift Wing (Colorado Springs, Air Force Reserve) have been deployed to Fresno, CA in support of wildland fire operations.

One RC-26 aircraft and support personnel from the 141st Aerial Refueling Wing (Washington Air National Guard) has been deployed to Fairchild AFB (Spokane, WA) in support of wildland fire operations.

One RC-26 aircraft and support personnel from the 162nd Fighter Wing, (Arizona Air National Guard) has been deployed to Mahlon Sweet Field (Eugene, OR) in support of wildland fire operations.

Active Incident Resource Summary

New large incidents:	1
Uncontained large fires:	13
NIMOs committed	1
Type 1 IMTs committed:	4
Type 2 IMTs committed:	9

Milli, Deschutes NF. IMT 1 (Pierson). IMT is also managing the Belknap fire. Nine miles west of Sisters, OR. Timber. Extreme fire behavior with running, spotting and torching. Residences threatened. Evacuations, road, trail and area closures in effect.

Belknap, Ochoco NF. Twenty miles northeast of Prineville, OR. Timber, brush and grass. Minimal fire behavior. Structures threatened. Road, trail and area closures in effect.

Chetco Bar, Rogue River - Siskiyou NF. NIMO (Houseman), IMT 2 (Greer). Sixteen miles west of Selma, OR. Timber and brush. Extreme fire behavior with wind-driven runs and long-range spotting. Structures threatened. Evacuations, road, trail and area closures in effect.

Umpqua North Complex (6 fires), Umpqua NF. IMT 1 (T. Kurth). Fifty miles east of Roseberg, OR. Timber, brush and grass. Active fire behavior with flanking and single-tree and group torching. Structures threatened. Evacuations, road, trail and area closures in effect.

Jones, Willamette NF. IMT 2 (Ciraulo). Ten miles northeast of Lowell, OR. Timber and grass. Active fire behavior with running and spotting. Structures threatened. Road, trail and area closures in effect.

Bridge Creek, Colville Agency, BIA. IMT 2 (Sheldon). Eleven miles northeast of Keller, WA. Timber, tall grass and light logging slash. Active fire behavior with flanking, isolated torching and short-range spotting. Road closures in effect.

Norse Peak, Okanogan - Wenatchee NF. IMT 2 (Gales). Eleven miles west of Cliffdell, WA. Timber. Active fire behavior with group torching, backing and spotting. Residences threatened. Evacuations, road and area closures in effect.

Miller Complex, Rogue River - Siskiyou NF. IMT 2 (Arroyo). Seventeen miles east of Cave Junction, OR. Timber. Active fire behavior with group torching, running and creeping. Structures threatened. Road and trail closures in effect.

Falcon Complex, Umpqua NF. IMT 2 (Johnson). Twenty-five miles east of Tiller, OR. Timber, brush and grass. Active fire behavior with flanking, running and creeping. Structures threatened. Road closures in effect.

High Cascades Complex (2 fires), Rogue River - Siskiyou NF. IMT 1 (von Tillow). Nine miles northeast of Prospect, OR. Timber. Moderate fire behavior with smoldering, creeping and single-tree torching. Road, trail and area closures in effect.

Whitewater, Willamette NF. IMT 1 (Schulte). IMT is also managing the Rebel fire. Ten miles east of Idanha, OR. Timber and brush. Moderate fire behavior with backing, flanking and single-tree torching. Structures threatened. Road, trail and area closures in effect.

Rebel, Willamette NF. Twenty two miles north of Oakridge, OR. Timber. Active fire behavior with backing, flanking, and single-tree torching. Residences threatened. Road, trail and area closures in effect.

Diamond Creek, Okanogan - Wenatchee NF. IMT 2 (Andrews). Twenty-five miles north of Winthrop, WA. Timber and grass. Active fire behavior with torching, backing and flanking. Structures threatened. Road, trail and area closures in effect.

Jolly Mountain, Okanogan - Wenatchee NF. IMT 2 (Sinclair). Thirteen miles northwest of Cle Elum, WA. Timber. Minimal fire behavior with backing. Structures threatened. Trail and area closures in effect.

Staley, Willamette NF. IMT 2 (Goff). Twenty-three miles south of Oakridge, OR. Timber and brush. Moderate fire behavior with smoldering, crowning and short-range spotting. Road closures in effect.

Nena Springs, Warm Springs Agency, BIA. Seven miles northeast of Simnasho, OR. Timber and short grass. Active fire behavior with group torching, wind-driven and uphill running. Structures threatened. Evacuations, road, trail and area closures in effect.

East Saddle, Mid-Columbia National Wildlife Refuge Complex. Ten miles west of Othello, WA. Brush and short grass. No new information.

Noisy Creek, Colville NF. Six miles southeast of Metaline Falls, WA. Timber and brush. No new information.

Whychus, Ochoco NF. Ten miles northeast of Sisters, OR. Brush and tall grass. No new information.

Flounce, Medford District, BLM. Started on state land 12 miles northwest of Shady Cove, OR. Timber, brush and tall grass. No new information.

Bear Butte, Wallowa - Whitman NF. Twenty miles northwest of Baker City, OR. Timber. No new information. Last report unless new information is received.

Shan Creek, Rogue River-Siskiyou NF. Transfer of command from IMT 2 (Greer) back to the local unit occurred yesterday. Ten miles west of Grants Pass, OR. Medium logging slash, timber and grass. No new information.

New fires:	8
New large incidents:	0
Uncontained large fires:	6
Area Command teams committed:	1
Type 1 IMTs committed:	2
Type 2 IMTs committed:	7

Area Command Team (Sexton) is managing large fires on the Lolo National Forest and Flathead Reservation.

Lolo Peak, Lolo NF. IMT 1 (Poncin). Ten miles southwest of Lolo, MT. Timber. Extreme fire behavior with crowning, running and spotting. Residences threatened. Evacuations, road, trail and area closures in effect.

Sapphire Complex (3 fires), Lolo NF. IMT 2 (Pearson). Fifteen miles southeast of Clinton, MT. Timber. Active fire behavior with wind-driven runs, group torching and long-range spotting. Structures threatened. Evacuations, road, trail and area closures in effect.

Sunrise, Lolo NF. IMT 1 (Lund). Eleven miles east of Superior, MT. Timber and brush. Active fire behavior with flanking, backing and creeping. Structures threatened. Evacuations, road, trail and area closures in effect.

Rice Ridge, Lolo NF. IMT 2 (Goldman). Six miles north of Seeley Lake, MT. Timber. Moderate fire behavior with backing, single-tree and group torching. Structures threatened. Road, trail and area closures in effect.

Meyers, Beaverhead - Deerlodge NF. IMT 2 (Esperance). Twenty-five miles southwest of Philipsburg, MT. Timber. Active fire behavior with short-crown runs, group torching and spotting. Structures threatened. Evacuations, road and area closures in effect.

Hanover, Nez Perce - Clearwater NF. IMT 2 (Bales). Four miles northeast of Florence, ID. Timber, brush and grass. Moderate fire behavior with flanking, running and short-range spotting. Structures threatened. Road, trail and area closures in effect.

Liberty, Flathead Agency, BIA. IMT 2 (Rohrer). Seventeen miles southeast of Arlee, MT. Timber. Active fire behavior with flanking, group torching and short-range spotting. Structures threatened. Trail and area closures in effect.

Gibraltar Ridge, Kootenai NF. IMT 2 (Connell). Seven miles east of Eureka, MT. Timber. Moderate fire behavior with creeping, torching and spotting. Residences threatened. Evacuations, road, trail and area closures in effect.

Tamarack, Northwestern Land Office, Montana DNR. IMT 2 (Hutton). IMT is also managing the Peoples Creek fire. Started on Forest Service land 22 miles northwest of Marion, MT. Timber. Moderate fire behavior with backing, spotting and single-tree torching. Road closures in effect.

Buck, Idaho Panhandle NF. Sixteen miles southeast of Avery, ID. Timber and brush. Minimal fire behavior. Road, trail and area closures in effect.

Blue Bay, Flathead Agency, BIA. Ten miles northeast of Polson, MT. Timber. Moderate fire behavior with isolated torching, single-tree torching and creeping. Road, trail and area closures in effect.

Wolverine, Blackfeet Agency, BIA. Ten miles northeast of St Mary, MT. Timber, brush and short grass. Minimal fire behavior. Structures threatened.

Sprague, Glacier National Park. Previously reported incident. Nine miles northeast of West Glacier, MT. Timber. Active fire behavior. Trail closures in effect. Last report unless significant activity occurs.

Predictive Services Discussion: An upper low will form off the California coast, drawing moisture across the Southwest. Scattered rain and thunderstorms will continue over the southern Rockies and spread northward into Colorado. Widely scattered storms will develop across southern Great Basin to the Sierras. Breezy conditions will continue across the northern Rockies. In the central and eastern U.S., scattered thunderstorms will form across the northern and central Plains to the Great Lakes. Storms will also form along the coast from the central Gulf to the Mid-Atlantic. Temperatures will generally 80s and 90s across the country with readings in 100-110 range in the desert southwest and across far south Texas and in the 60s over the higher elevations of the West.

Mountain Flying – Part 2

Orographic Lifting. As the wind blows moist air upslope, it will cool and may form clouds. If, as is often the case in winter, the air is stable, the clouds will stay close to the mountain, forming a "cap" cloud. However, if the air is unstable, as is usually the case in summer, this initial lifting will be enough to start convection and result in thunderstorm formation.

Microbursts. Wet microbursts are typically found in the middle of an active thunderstorm or intense rain shower and avoiding the strong downdraft is relatively easy. Dry microbursts, however, are more insidious because they occur with little or no warning in the clear air beneath virga. Dry microbursts are common in and near the Rockies and other mountainous areas of the western U.S. in the summer. Dry microbursts are likely when thunderstorms with bases above about 3000' to 5000' AGL exist and the temperature/dew point spread on the surface is more than about 40 degrees (F). A good indicator of a dry microburst is when you see dust blowing underneath the thunderstorm. Recommend staying clear until the event passes (usually a few minutes).

Density Altitude. Density altitude is pressure altitude corrected for temperature. Higher density altitude reduces overall performance of the airplane. At higher density altitudes, takeoff and landing distances are increased, thrust is decreased, rate of climb and actual service ceiling are decreased, true airspeed is higher for a given indicated airspeed, and turning radius is larger for a given indicated airspeed (due to higher TAS). To help regain performance at high density altitudes, consider reducing aircraft weight (retardant and / or fuel load). Check your AFM performance data charts for takeoff and landing distances, climb rates, etc. Since your true airspeed is higher for a given indicated airspeed, many pilots respond to the visual cues of higher ground speed on takeoff by rotating at a lower IAS than normal. Rotating at too slow an airspeed may cause the airplane to take an even longer ground run than necessary. Turning radius is proportional to the square of true airspeed. For example, if you increase your TAS by only 10%, your turn radius will increase by 20%. In the fire pattern this may result in an overshooting turn to final with the resultant last minute corrections, rushed approach, etc. If in doubt, go around. Higher density altitudes also affect best rate and angle of climb airspeeds. Refer to your AFM to be sure you are flying the correct airspeeds to get the performance you expect. Be extra cautious about getting slow at high density altitudes. Throttle response will be delayed (due to less dense air) and thrust is reduced due to less air over the prop blades. Stalls at high density altitudes and close to the ground can be devastating with insufficient time / performance response to recover.

Ridge and Pass Crossing. A good technique is to cross ridges or passes at the ridge elevation plus at least 1000' AGL. If the winds at mountain top level are above 20 knots, increase to 2000' AGL. Plan to be at that altitude at least three miles before reaching the ridge and stay at that altitude until at least three miles past it. This clearance zone will give you a reasonable safety zone to avoid the most severe turbulence and down drafts in windy conditions and / or the ability to turn the aircraft around in a descending turn if necessary. If conditions or airplane performance dictate, you may need to fly along the windward side of a ridge to find updrafts for gaining altitude before crossing a ridge. You may also need to circle before reaching the ridge if climbing out of a valley airport. Cross ridges at a 45° angle. This allows you to turn away from the ridge quicker if you encounter a severe downdraft or turbulence. Once you have crossed the ridge, turn away from it at a 90° angle to get away from the most likely area of turbulence quickly. Plan your crossing to give yourself the ability to turn and descend toward lower terrain quickly if necessary.

Rough Terrain. Heads up near or above abrupt changes of terrain such as cliffs or rugged areas. Dangerous turbulence can be expected, especially with high winds.

Box Canyons. Try to avoid flying up the middle of a canyon. It's better to fly along one side or the other (preferably the downwind side) at sufficient altitude to be in a better position to execute a 180-degree turn. Allowing sufficient altitude for a descending 180-degree turn along with a turn into the wind (if possible) decreases actual turn radius across the ground. Use extra caution when mountain tops are obscured. Many accidents occur as a result of pilot's turning up the wrong drainage, ending sadly in a box canyon. Monitor GPS closely.
